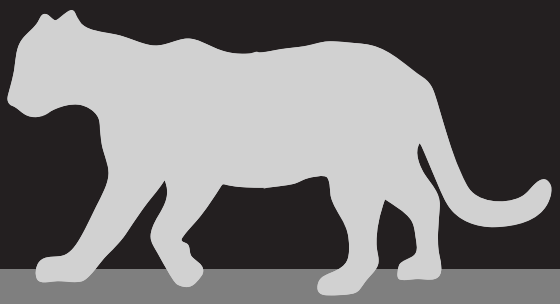
NAPLES ZOO at CARIBBEAN GARDENS

60 SECONDS FOR A LIFE



ROADS AND FLORIDA PANTHER CROSSINGS

Florida's state animal has made one of the great wildlife comebacks in history — from just 20 panthers in the 1990s to over 200 today. As the population grows, driving the posted speed in crossing zones is one of the most direct ways Floridians can help continue that recovery.

DRIVE THE LIMIT. SAVE A PANTHER.

Panther activity is greatest between dusk and dawn when visibility is lowest. Nighttime speed zones exist where panthers are known to frequently cross roads. At the posted 45 mph speed, driving through a 3-mile-long crossing zone only takes an extra minute compared to traveling at 60 mph.

200+ PANTHERS

UP FROM 20 IN THE 1990S!

THANKS FOR SUPPORTING RECOVERY

WATCH NOW

SEE HOW FAST IT HAPPENS.

WATCH A REAL NEAR MISS.

Research showed avoiding an animal as large as a moose at night requires even experienced drivers going 40 mph — hence the wisdom of the 45-mph nighttime speed in crossing zones. Driving at this rate gives you more time to react — protecting you, your passengers, and Florida's panther.
